                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                \dot{\delta}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                             The present sequence is that of a single chain FV (scFV) derivative of antibody 197/AD3, comprising the heavy (WH) and light (WL) chain variable regions of 193/AD3 joined by an artificial, flexible linker peptide. The scFV was obtained by PCR amplification of cDNAs for 193/AD3 WH and VL regions and cloning in vector pDAP2. 193/AD3 is an example of anti-human Factor IX (FIXA) artibodies of the invention. Anti-FIX/FIXa and their derivatives, including scFV and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor activity or FIXa activity of FIXa administration leads to an increase in the procoagulant activity of FIXa, even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                     180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A bifunctional protein (AAR05505) consists of a single chain antibody, scFv(FRP)5, directed against the tumour erbB-2 antigen, a hinge region, and a functional zera chain obtd. from a T-cell receptor. The protein is expressed in host cells, esp. cytotoxic T-lymphocytes, providing them with a defined tumour cell specificity enabling targeting to defined tumour cells and MHC-unrestricted and MHC-independent tumour destruction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19 QIQLVQSGPELKKRGETVKISCKASGYPFINYGMNWVKQAPGQGLKWMGWINTSIGESTF 78

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A multidomain protein (AAR95053) has a FLAG epitope, a single chain antibody, scPv, of monoclonal antibody FRPS (raised against human tumour cell HRPS antigen) that acts as a ligand domain, a non-cytotoxin portion of Pseudomonas aeruginosa exotoxin A acting as a translocation domain and (AAT93409) and can be expressed in E. coll (resulting in removal of ompa signal peptide). It is used with an effector nucleic acid that comprises e.g. a gene to be delivered to a cell and a cognate structure for the transfer, suitable for gene therapy. (Updated on 16-OCT-2003 to

         A multidomain protein (AAR95056) has a FLAG epitope, the DNA binding domain of yeast GAL4, a portion of diphtheria toxin that acts as a translocation domain, and a single chain antibody, scPv. of monoclonal antibody FRP5 (raised against human tumour cell HER2 antigen) that acts as a ligand domain. It is the product of a fusion gene (AAT29412), and is used with an effector nucleic acid that comprises e.g. a gene to be delivered to a cell and a cognate structure for the GAL4 DNA binding domain. This provides a novel means of nucleic acid transfer, suitable for gene therapy. (Updated on 16-OCT-2003 to standardise OS field)

A multidomain protein (AAR95057) comprises a FLAG epitope, the DNA binding domain of yeast GAL4, a portion of diphtheria toxin that acts as a translocation domain, and a single chain antibody, scFv, of monoclonal antibody FRP5 (raised against human tumour cell HER2 antigen) that acts as a ligand domain. It is the product of a fusion gene (AAT29413), and is used with an effector nucleic acid that comprises e.g. a gene to be delivered to a cell and a cognate structure for the GAL4 DNA binding domain. This provides a novel means of nucleic acid transfer, suitable for gene therapy. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        423

                                                                                                                                    ;;
;;
        scFv(FRP5)/TGF alpha-ETA (AAW05138) comprises the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor exbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to human transforming growth factor (TGF). alpha (see also AAW05137). It is encoded by plasmid pMS238-5-TGF (AAT40388). This plasmid can be utilised in the profun. of the bispecific fusion protein in bacterial (sep. E. coli) host calls. Such fusion proteins (see also AAW05139-44) are useful as antitumour agents

The sequence given is the single chain recombinant antibody desiganted FV(RRPS)-phbA. The alkaline phosphatese gene (phoA) was used as a marker gene so that E. coli transformed with the fusion gene could be identified. The fusion gene was expressed in E. coli and the antibody was extracted. This recombinant antibody can be used for the qualitative and quantitative determination of c-erbB-2. This can be used for monitoring or in-vivo localisation of the correspressing c-erbB-2. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              138

scFv2(FRP5/FRP5)-ETA version 2 (AAW05143) includes 2 copies of the single -chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor erbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa. It is encoded by plasmid pM8218-5-5 (AAT42043). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (esp. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò

scFv2(FRP5/225)-ETA (AAW05139) comprises the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth actor receptor erbs-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05133). It is encoded by plasmid pMS238-5-225 (AAT42039). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (sep. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SPKLLMYYASNRYTGVPDRFTGSGYGTDFTFTISTVQAEDLAVYFCQQDYGSPPTFGGGT 236

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               scFv2(FRPS/FRPS)-ETA version 1 (AAW05142) includes 2 copies of the single chain binding region of murine monoclonal antibody FRPS (specific for human epidermal growth factor receptor exbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa. It is encoded by plasmid pMS242-5-5. (AAT42042). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (esp. E. coli) host calls. Such fusion proteins (see also AAW05138-44) are useful as antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         222

binding region of murine monoclonal antibody FRP5 (specific for human binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor exbb2.) see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05133). It is encoded by plasmid pMS240-5-225 (AAT42041). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (esp. E. coli) host calls. Such fusion proteins (see also AAW05138-44) are useful as

                      to portions of exotoxin A from Pseudomonas aeruginosa. It is encoded by plasmid pan MX246-5-5 (AAT42044). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (esp. E. coli) host cells. Such fusion proteins (see also AAW05138-43) are useful as antitumour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequences given in AAR26982-3 contain part of the exotoxin A (ETA) sequence corresponding to positions 252-613 of the full exotoxin A sequence. These sequences are encoded by FV(FPS)-ETA fusion genes. The ETA sequence was used as a marker gene so that E. coll transformed with the fusion gene could be identified. The fusion gene were expressed in E. coll and the antibodies were extracted. These recombinant antibodies can be used for the qualitative and quantitative determination of c-erbs. This can be used for monitoring or in-vivo localisation of tumours overexpressing c-erbs-2. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   208

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 8, M. Application US/08465473B

Sequence 5. Application US/08465473B

Patent No. 5939531

GENERAL INFORMATION:

APPLICANT: Winfried S.

APPLICANT: Harwerth, Ina-Maxia
APPLICANT: Hardman, No. 5939531man
APPLICANT: Aridman, No. 5939531man
APPLICANT: Zwickl, Markus
TITLE OF INVENTION: Recombinant Antibodies Specific for a
TITLE OF INVENTION: Recombinant Antibodies Specific for a
TITLE OF INVENTION: Stowth Factor Receptor
NUMBER OF SEQUENCES: 34
